Public and Patient Involvement in Health Research
Inaugural Lecture “Public and Patient Involvement in Health Research”

Don’t miss this inaugural lecture at City University London by our Professor Amanda Burls as she considers the state of public and patient involvement in shared decision-making and health research. Professor Burls, a public health physician founded and directs ThinkWell, a novel internet-based research program, which aims to help the public understand health information so they can make informed health decisions and up and help to design and participate in online research studies.

Public Network For Understanding
Health Research

Dr Burls will introduce the work of the Network to Support Understanding of Health Research and organization for which she co-organized a Conference on Enhancing Public Understanding of Health Research in 2011, which resulted in the formation of the International Network for Enhancing Understanding of Health Research (NUSHR). Public and Patient involvement in Health Research is the way to improved Decision making where the public learns how to take control of their own health care.

Founder of ThinkWell

Dr Burls is the founder of **ThinkWell**, the coordinator of **the international Network to Support Understanding of Health Research (NSUHR)**. She has worked with the **Critical Appraisal Skills Programme (CASP)** since its inception in 1993. She was a founding member of, and still directs works the **CASP International Network**.

Speaker: Professor Amanda Burls – Professor of Public Health, City University London.
